

RED Digital ADAS services

RED Digital ADAS services

asTech through our Red (EU) Division provide extensive services with regard to Advanced Driver Assistance Systems (ADAS). Services include the supply of Digital ADAS calibration systems and competence training to enable industry requirements to be met and key-to-key times drastically reduced.

Red Digital ADAS equipment:

Patented keystone technology – The digital display allows quick projection of manufacturer targets parallel to the vehicle reducing set up time and any future target boards released are a simple download away

Easy to use – Calibrate vehicles in as little as 6 easy steps

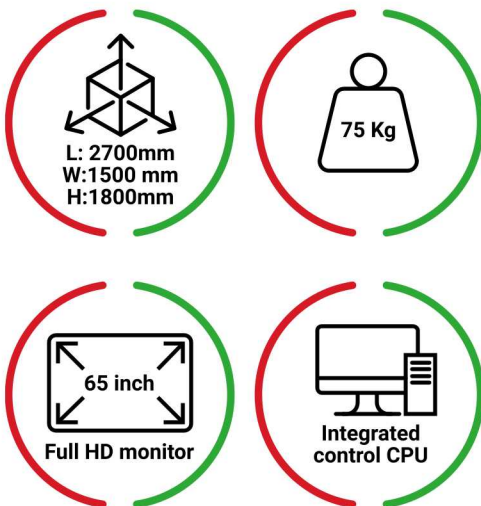

Keystone system – This unique adaptive system adjusts for the environment (distance from vehicle, centralisation etc) and adapts the target image accordingly. Saving time setting up the car

Universal coverage – The system covers nearly every make and model, and is constantly updated to include new models ensuring the largest market coverage.

Key features

- Patented keystone technology, featuring an adaptive system for automatic compensation of vehicle positioning
- Motorised target height adjustment
- Measurement via high precision laser distance meters
- Fully adjustable radar calibration panel
